MATH 10120: WEBASSIGN HOMEWORK SIGNUP

We are using WebAssign for online homework; there will be no paper homework.

1. **Getting started with WebAssign:** the first thing you need to do is enroll yourself in the class.
   - Go to WebAssign, located at `https://www.webassign.net/`.
   - Under the "STUDENTS" tab select "I have a class key".
   - Enter the class key "nd" (first box) "1166" (second box) "0879" (third box) (no quotes in the class key). In other words, our class key is **nd 1166 0879**.
   - Verify that you are enrolling for course "MATH 10120 — Section 01" with me (Adrian Pacurar) as the instructor, then click on "YES, THIS IS MY CLASS".
   - *If you already have a WebAssign account*, you can now log on to WebAssign with your WebAssign user name and password (NOT your ND user name and password!), and you will have immediate access to the class.
   - *If you don't yet have a WebAssign account*, you can now create one, with a user name and password of your choosing; then when you log in to WebAssign you will have immediate access to the class.

2. **Using WebAssign:** The first assignment you will see when you enroll and login is entitled *Entering Answers in EWA*, and takes you through all the features of WebAssign that you should be aware of.

   The next assignment you will see is entitled *Homework 1: Sections 6.1 and 6.2*; this is the first actual course assignment, and becomes visible early on the afternoon of Thursday June 15, due at 1:15PM of Tuesday Jun 19. It counts for 0 points (to allow you to get used to the system), but you should still complete it since it is on examinable material.

   In general, new assignments will become available five days before their due dates, and will be due the day following the relevant lecture. You are responsible for noting the exact due dates for each assignment!

3. **Getting help:** WebAssign has many built-in help tabs that you should use if you have any problems; you should also look over the quick-start guide (courtesy of my advisor, David Galvin):

   `http://www3.nd.edu/~dgalvin1/10120/10120_S17/WA_Student_Quick_Start.pdf`

   You can also bring up any WebAssign problems you have with me during office hours after class.

4. **The access code:** You must purchase an access code for this course (it comes with any of the book options listed in the syllabus). You will need to have entered your access code to ensure that you can use WebAssign.
